Summary |

Game Developer with hands-on experience building a **custom C++ Vulkan game engine** and a **Unity (C#) mobile game**. Proficient in real-time rendering pipelines, gameplay systems, and cross-platform development. Passionate about game engine architecture and delivering polished interactive experiences.

Technical Skills

Game Engines	Unity (C#), Unreal Engine	Mobile (Android/iOS), UI Systems
Graphics / APIs	Vulkan, OpenGL, DirectX 12, GLFW, ImGui	3D & Art Blender, ZBrush, Substance Painter, Substance Designer
Languages	C++, C#, Python, TypeScript, CMake	Dev Tools Git, GitHub, Visual Studio, VS Code, Jira
Gameplay	Game Loop, Physics & Collision, Enemy AI,	

Experience

Athena Education

Aug 2024 – May 2025

Expert Mentor / Senior Associate - Design

- Designed and conducted a **Game Design & Development Academy** covering game mechanics, and level design for 8+ middle school students.
- Mentored students through game design, UI/UX, web and app development, CAD, and animation portfolio projects for Ivy League applications and international competitions (Breakthrough Challenge).

Monkey Science

Aug 2023 – Oct 2023

Creative Engineer (Intern → Full-time)

- Built **real-time interactive 3D science simulations** using TypeScript and BabylonJS (WebGL), deployed in a production React environment across multiple schools.

Education

Indian Institute of Information Technology, Una

2026

Bachelors of Technology, Computer Science and Engineering

Projects

Mango Engine

Github Repository

C++, Vulkan, GLFW, ImGui, stb_image, tinyobjloader

- Custom **3D game engine** built from scratch in C++/Vulkan with a full rendering pipeline: swap chain, render pass, framebuffers, command buffers, and vertex/index buffers.
- Integrated ImGui debug UI, Spdlog logging, and an asset pipeline for textures and 3D meshes.

Tower of Trials

Unity, C#, Android

- 2D Roguelike RPG Platformer for mobile platforms made with Unity Engine

Kokum

Github Repository

C++, x86 Assembly

- Low-level **math library** (vectors, matrices, transforms) in x86 Assembly with a C++ wrapper; planned as Mango Engine's core math backend.
